

PT MULTI NITROTAMA KIMIA

**INTEGRATED  
MINING SERVICES  
FOR EXPLOSIVES**

**Company Profile**

# Supply Reliability and Short Supply Chain

MNK holds a critical and integral part of the mining value chain when blasting is required to gain economic benefits and faster production rate. We provide end-to-end, integrated mining services for explosive starting from AN production and distribution, ANFO and emulsion mixing, initiation systems, to down-the-hole and total load blasting services. MNK is the market leader of the Indonesian AN market, servicing Indonesia's leading mining companies.

MNK's reliability as a manufacturer is unrivalled with 20+ years of experience producing Nitric Acid (NA) and Ammonium Nitrate (AN) which is essential for blasting material with proven technology and long-term contract for Ammonia (NH<sub>3</sub>) supply to our plant. Our production capacity has been expanded to 150,000 MT per year of AN to further ensure product availability and supply reliability for our customers.

We are establishing a detonator manufacturing plant in Handil, East Kalimantan to ensure supply reliability for initiation systems. The detonator plant is scheduled to start production by end 2013, with initial total capacity of 2.2 million pcs of detonators per year.

MNK is the only company in Indonesia that holds comprehensive commercial explosive license from the Indonesian Government. We can produce, distribute, store and import commercial explosives in Indonesia, and our ability to import from our overseas supply network further guarantees MNK's ability to ensure timely and reliable explosive supply to our customers.

MNK has a comprehensive supply chain infrastructure to ensure explosive supply reliability to our customers throughout Indonesia. Several regional hubs has been established to support our business in order to achieve effective and efficient deliveries to meet our customers' demand.

# BLASTING SERVICES

Blasting services is a part of our integrated solutions to our customers; we provide customized blasting solutions, tailor-made as per customers' requirements. MNK is proud to be the leading name in Indonesia blasting industry with our expertise, experience and proven track record. By using our own specifications of bulk explosives i.e. ANFO and emulsion with in-house engineering design of emulsion mixing plant and mobile mixing unit, we can offer a full range of services, including :

- DTH (Down The Hole)
- TLBS (Total Load Blasting Service)
- Blasting Technical Services and Supports

We work closely with our customers to understand their blasting requirement & determine size and scope. We develop detailed project plan and individually configure each on-site plant and service trucks to meet specific user needs, with the aim to provide flexible and tailored blasting solutions for each customer. We have established and constructed a number of blasting service projects throughout Indonesia.
